- Shamanic applications: yesterday, today and tomorrow
- Shamanism as a tool for transformation
- Who can be a shaman

Birth, Life, Death, Crossing and Beyond

Birth, life, death and crossing are experiences we all go through, yet there is relatively little known about them. Most every culture on the planet has a shamanic practice at its roots. All shamanic practices have a provision for ushering souls in and out of this reality. What can be learned from these ancient practices that can help us today as we transition in and out of the world we know?

- Where do we come from
- What determines the family into which we are born
- How can we assist the gestation and birth process through shamanic means
- Is our life predestined
- What is free will
- How can shamanism help us live more conscious lives
- What determines when we die
- What do the Bardo and Purgatory have in common
- Why do we experience a life review
- What is psychopomping
- Where do we go

The Ancestors and Descendants

All shamanic traditions honor the ancestors and descendants, taking responsibility for how our actions impact both up to the seventh generation and beyond. Modern science is now discovering that our DNA and genetics are not set in stone but malleable, responding to our traumas and our will while passing both forward and backward from generation to generation.

- Why did so many traditions revere their ancestors, to the point they would carry their bones with them when relocating
- Why are burial grounds considered sacred
- What is ancestral damage
- What did the ancients know about the passing on of trauma through the DNA
- What shamanic practices are designed to remove ancestral trauma from DNA
- How much of our personality, expression and actions are dictated by our ancestry
- Can we reclaim more of our free will through shamanic means
- Can personal healing impact not only our descendants but also our ancestors
- What is happening today on the planet that makes the DNA more malleable
- How can our actions and personal healing impact tomorrow
- What impact can we have even if we don't have children ourselves

The Ancient Power of Dreaming

Sleeping and dreaming are mysterious ways we all spend at least one third of our lives, yet today, little is known of the purpose and power of dreams. All shamanic practices use dreams, both spontaneous and interactive, in multiple ways to discern future events, process past ones and consciously manifest the future.

- What are dreams
- What different kinds of dreams are there
- What is the purpose of dream interpretation
- Can we direct our dreams and what purpose would it serve to do so
- What has been the impact of the modern day tendency to disregard dreams
- Can dreams be precognitive
- How can we use our dreams to glean accurate information about future events
- Can we change outcome of a precognitive dream
- What is a daydream
- What is dream sharing
- How do we manifest through our dreams
- Do we dream our reality into being

The Hidden Dynamic of Story Telling

All shamanic practices have stories, myth and legends that have been passed down through the lineage through oral tradition across the ages. While often seen as superstitious or a form of entertainment by anthropologists, these stories have the power to engage the listener on deep, unconscious levels, opening them up to possibility and eliminating mental blocks and limitations.

- What are personal stories
- How can rewriting out personal stories transmute our lives
- What are cultural stories
- How can embracing stories expand our concept of possibility
- Can we manifest through stories

Additional Topics

Shamanism and the Nature of Reality

Physics tells us that more than 90% of the universe is beyond human perception. That would indicate that our current reality is comprised of 10% of all that is. What if we had a way of viewing more of the “quantum soup” – of the unseen? How would that change our concept of what is and is not possible? The ancient practice of shamanism is an organized set of rituals designed to enable the practitioner to view and manage matter at the quantum level. The hidden power of shamanism has long been overlooked.

Synchronicity and Omenology

What we speak of today as coincidence or synchronicity was and is used by shamanic practices as a viable form of omenology. Shamanism is both earth and stellar based and therefore in tune with the currents moving in perfect concert through all things. Shamanic practices read the signs in nature to predict personal and universal trends and events with amazing accuracy.

Ghosts and Spirits from a Shamanic Perspective

In current times, EMF meters, infrared photography, ghost hunters and mediums abound, yet it is amazing how little we really know about the unseen aspects of our world. While we chase the ever elusive ghost, it is important to bear in mind that all spirits are not created the same. In some instances, we may be the very ghosts we seek.

Remote Viewing, Out of Body Travel and Bilocation as Elementary Shamanic Skills

Increasingly, the validity of OBEs, bilocation and remote viewing is being entertained by parapsychologists and researchers. While much of the phenomena is spontaneous, such as disassociation, there is evidence we bilocate in our dreams and there are now schools that successfully teach remote viewing. Amazingly, shamanic practices worldwide have employed all the above as basic skills across the ages.
